New Way of Work

```
import { Future } from '@anthropic/claude-code';

const Presentation = () => {
  return (
      <Embracing Agentic Coding/>
      with Claude Code
  );
};
```

// Unlearn, Relearn, and Ship Faster in 2026

Why Now: The 2026 Coding Landscape

25%
mid 2025

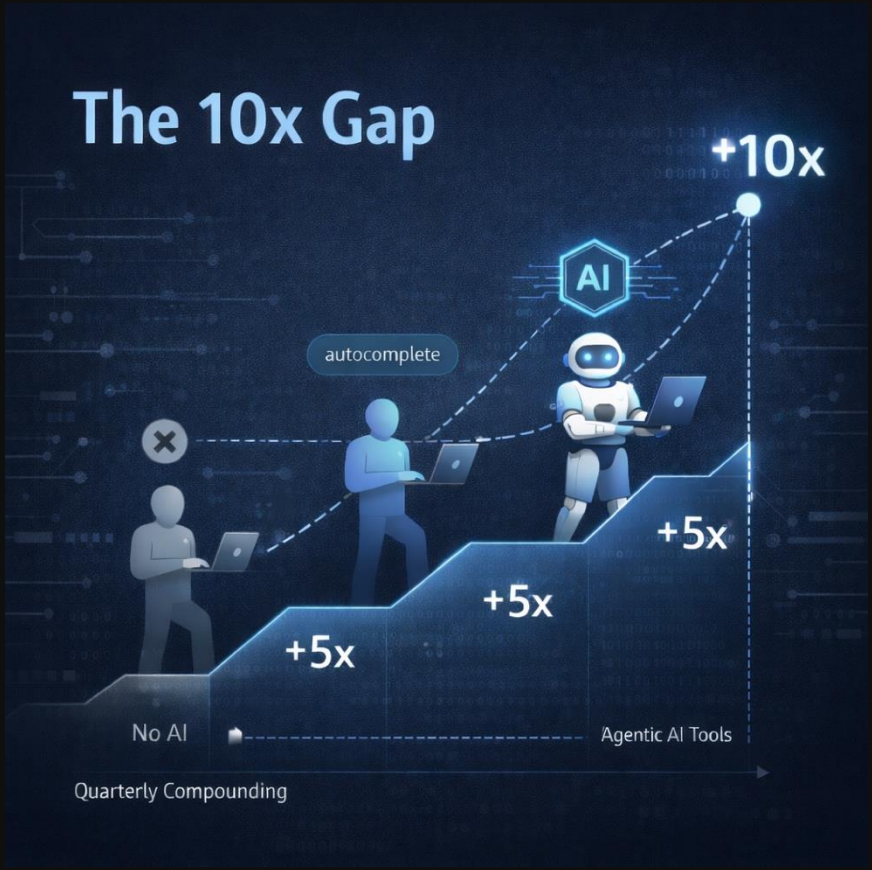
41%
of all code is now AI-generated

90%
end 2026

60%
of developer work using AI tooling

< 20%
delegated to AI

Source: NetCorp, CNBC, Anthropic



THE NEW TEAM DYNAMICS

HUMAN + AI TEAMS

Every developer gets a highly capable assistant that never sleeps, never gets bored of repetitive tasks, and learns your codebase.

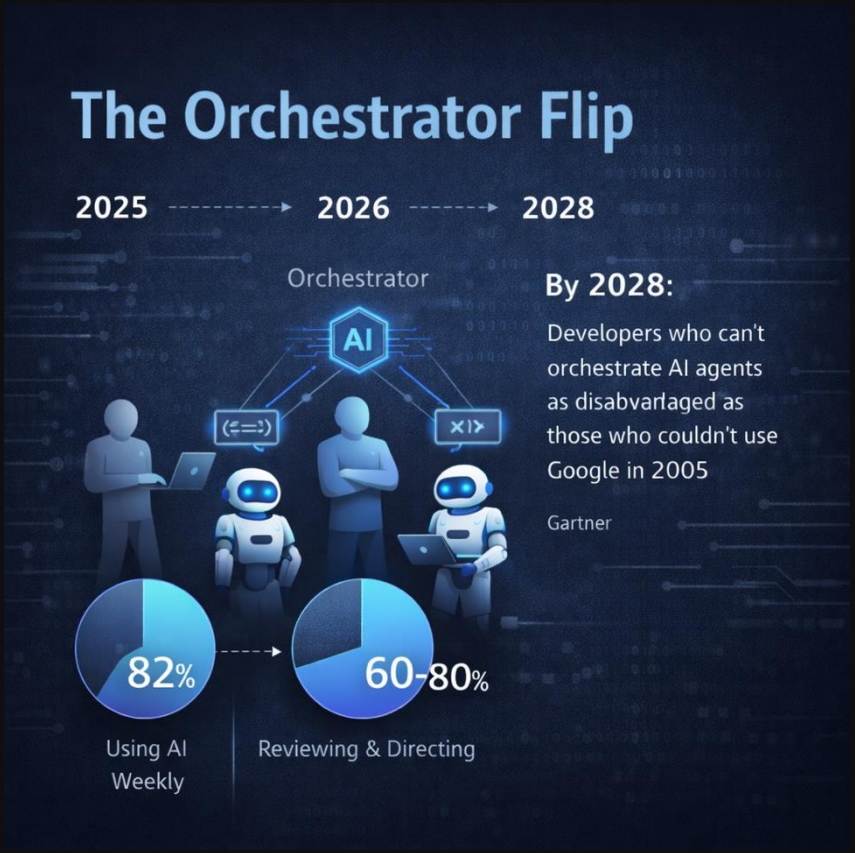
BEFORE

2 devs doing everything

AFTER

2 devs + 2 AI assistants

Same headcount. 2-3x throughput on routine work.



adoption_reinforcement.js history_log.json

```
// Unlearn, Relearn, and Ship Faster
import { History, Future } from'@dev-team/context';
const CurrentSession = () => {
    return  (
        <Reinforcement>
```

We've Been Here Before

> AI Adoption Reinforcement

```
        </Reinforcement>
    );
};
```

Status: Normalization in progress...

main 0 errors, 0 warnings Ln 12, Col 4 UTF-8 Prettier: On

The Disruption

```
const shift = {
  from: 'Manual Labor',
  to: 'Electrification',
  impact: 'Exponential'
};
```

Typical reaction: "Machines will take our jobs."

Reality: New roles emerged (engineers, operators, safety techs).

Early Mover Advantage

Ford Assembly Line (1913)

While competitors waited, Ford adapted.

Build Time	-87% Reduction
12 hrs	
93 min	

Takeaway: Competitors took years to catch up. By then, Ford owned the market. Leaning in early compounded advantage.

The Disruption

```
class DigitalTransformation {
  constructor() {
    this.replaced = 'Paper Processes';
    this.newRoles = ['Devs', 'SysAdmins'];
  }
}
```

Typical reaction:

"I'm not a typist."

Reality:

Created the modern tech world & roles we hold today.

Early Mover Advantage

Amazon (1995) WINNER

Leaned into internet while retail dismissed it.

Market Cap Trajectory

Amazon	$1.8T
Borders	$0

Late Skeptics:

Borders, Blockbuster, Tower Records waited. None exist anymore.

Takeaway: Tools shift → roles evolve → early adopters set the pace. Waiting is the highest risk.

"THIS WILL REPLACE DEVELOPERS" — WE'VE HEARD IT BEFORE

Status: Debunked

Era	Technology	The Claim	What Actually Happened
1990s	RAD Tools Visual Basic, Delphi	*"Anyone can build software now"*	Developers learned them and built faster.
2000s	Outsourcing Offshoring Boom	*"We'll just hire cheaper devs overseas"*	Quality & coordination costs brought work back.
2010s	Low-Code Mendix, OutSystems	*"Business users will build apps"*	Hit a ceiling fast — complex logic still needed devs.
2015s+	No-Code Bubble, Webflow	*"No developers needed"*	Great for simple use cases; fell apart at scale.
TODAY	**Agentic AI** **AI-Assisted Coding**	*"AI will replace developers"*	History suggests: It becomes your superpower.

The Pattern

Every wave of "developer replacement" technology ended up becoming a **tool in developers' hands** — and raised the floor of what a good developer could deliver.

risk_assessment.sh

> Analyzing threat level...

> The real risk isn't AI replacing you.

WARN: It's a developer who uses AI well replacing you.

"The job was never just typing code — it was thinking."

> Conclusion: That's not a threat — it's a direction.

THE PATTERN IS ALWAYS THE SAME

```
> system_status_check.sh
✓ Introduction complete
⟳ Early adoption in progress...
Loading modules...
Calibrating workflows...

! Tipping point approaching
```

Key Message

We are currently between Early Adoption and the Tipping Point. The window to build advantage is right now. right now.

Note: Progress over perfection. Being "slow" is fine; stopping is not.
